

THE **POWERHEAD** MODULE

The new M-Tech Powerhead Module has been manufactured exclusively for the caravan park industry.

Constructed using marine grade, aluminium anodised to 25 microns, the M-Tech Powerhead Module far exceeds the industry standard of 15 microns, and is unparalleled in its strength and durability.

It can accommodate 4 x 15 amp single phase socket outlets, located behind lockable access doors, which can be closed when in use. The M-Tech Powerhead Module is also supplied with a powerhead illumination as standard.

The Powerhead's interchangeable access panels provide ease of installation, plus any service upgrades to cater for the ever increasing demands of the caravan park industry. Cable management hooks, three phase outlets, KWH metering, data and media communication outlets and energy saving LED lighting options are also available.

The M-Tech Powerhead Module can be installed on to an existing 60mm OD pipework, or incorporated onto an M-Tech multipoint system which can also include 15mm and 20mm water outlets.

Each Powerhead Module is allocated its own unique serial number at the time of manufacture. Therefore, in the unlikely event that your pedestal is ever damaged, you simply quote your serial number to the sales and support team at M-Tech and they can easily retrieve all of the details to provide spare replacement parts from our fully stocked stores facility.

TECHNICAL OPTIONS AVAILABLE INCLUDE:
