

## RUM | Remote Utility Monitoring & Control

Wireless Meter Reading, Fault Monitoring  
and Utility Control

RUM provides a wireless link between you and your marina's utility pedestals; quickly gathering meter readings, managing ground fault, and even disabling power at vacant slips - from any computer or device with internet access.

### Ground Fault Detection

RUM offers real-time monitoring and management of stray current at each slip. Isolate leakage and quickly reduce the potential for life threatening electrocutions.

### Electricity Monitoring

RUM simplifies the process of billing and monitoring power consumption. RUM transponders are reliable and accurate, making billing your customers quick and easy. Directly export meter data to your billing software in a single click.

### Power Control

RUM power control allows your facility to wirelessly enable and disable electrical services at each slip, also preventing utility theft and curbing power poaching.

### Water Control

RUM water control provides wireless control of water solenoids throughout your facility. Turn water utilities on/off remotely from any web-enabled computer.

### Lighting Control

Bring colour to your docks with RUM's new integrated LED controller. Wirelessly control the colour of lighting at the pedestals to create atmosphere at night, or help guide boaters to your available spaces.

### Water Monitoring

Wirelessly monitor water consumption at each slip by connecting RUM to your new or existing water meter. This is a great way to encourage conservation and offer direct savings to your bottom line.

M-Tech Marine Technologies specialises in the manufacture and supply of marina utility pedestals and associated equipment.

Servicing the industry for over 39 years, the first Pedestal designed and built in 1977. M-Tech has been prominent in the innovations and technical enhancements of marine service equipment. M-Tech have gained a wealth of knowledge in providing the marina operator and developer with complete solutions and have emerged as Australia's leader in the Marine Utility Pedestal Industry.

M-Tech offers complete project service, design supply and manufacture of service pedestals, emergency equipment, sanitation pump out systems, utility metering, spare parts and accessories, lighting and energy solutions plus custom utility design and project management services and installation services.
